

Goose-GMSE Simulation summary

Generated on 2020-02-04 13:09:18

Input parameters

| Parameter | Value |
|---------------------------|-------|
| No. of simulations | 5 |
| Number of years projected | 5 |
| Maximum no. culled | 2000 |
| Population target | 32000 |

Output

In 2020 the projected population size was between 33906 and 36957 individuals.

The projected population in 2020 does not overlap with the population target of 32000

After 5 projected years, the mean population size is predicted to be 3585 individuals above the population target of 32000

The projected population does not overlap the target in any of the projected years

Numbers culled per projected year

| Year | Mean projected pop. size | Mean no. culled | SD culled | Min. culled | Max. culled |
|------|--------------------------|-----------------|-----------|-------------|-------------|
| 2016 | 36805 | 2000 | 0 | 2000 | 2000 |
| 2017 | 37900 | 2000 | 0 | 2000 | 2000 |
| 2018 | 35789 | 2000 | 0 | 2000 | 2000 |
| 2019 | 36674 | 2000 | 0 | 2000 | 2000 |
| 2020 | 35585 | 2000 | 0 | 2000 | 2000 |
