

# Goose-GMSE Simulation summary

*Generated on 2019-04-26 16:19:30*

## Input parameters

Parameter	Value
No. of simulations	5
Number of years projected	2
Maximum no. culled	2000
Population target	32000

## Output

In 2017 the projected population size was between 38581 and 39502 individuals.

The projected population in 2017 does not overlap with the population target of 32000

After 2 projected years, the mean population size is predicted to be 7034 individuals above the population

target of 32000

The projected population does not overlap the target in any of the projected years

### Numbers culled per projected year

Year	Mean projected pop. size	Mean no. culled	SD culled	Min. culled	Max. culled
2016	37356	2000	0	2000	2000
2017	39034	2000	0	2000	2000
